

Start a new file in Geometry.

Select the circle tool.

To create a circle, tap once in the middle of the screen for the centre and then tap again for a point on the circumference.

Tap View, Zoom to Fit, to resize the circle to fit the screen.

Select the line segment tool.

Draw a chord using the line segment tool, starting at B and passing close to, but not through, the centre A.

Display the measurement toolbar. Tap to select circle centre A and line segment BC.

Change the displayed measurement to 0 and tap EXE.

BC is now a diameter of the circle with centre A.

If desired, tap **File, Save** to store a copy of this geometry file.
